

New wireless data network for Cootamundra & Gundagai

Earlier this year STRA completed wireless networks at Cootamundra and Gundagai for Cootamundra Gundagai Regional Council linking many council depots, offices, caravan parks, museums, sporting facilities and even Don Bradman's birthplace.

This single network provided the opportunity for council to consolidate their multiple internet accounts into one comprehensive service.

Working with Cootamundra Gundagai Regional Council's IT contractor, STRA supplied and installed all the wireless networking hardware for both a secure council network and public wi-fi network over approximately a fourteen day install period.

STRA often work with council IT departments and council's local contractors to ensure configuration and security settings are within the necessary parameters required.

Prior to supplying and installing the wireless network hardware, STRA prepared a network map and propagation plan to ensure the network would deliver the outcomes required by the council.

Glenn Welsh, Managing Director at STRA said we can prepare and supply wireless network modelling and propagation plans, hardware and installation to assist councils and businesses maximise the efficiency of their networks and consolidate external costs into one data account. Of course all wireless, transmission and broadcast networks must take into account the local topography and our propagation planning provides essential detail required to plan and deploy a wireless network.

For more information about this installation or communications, wireless technology, remote site monitoring and communications site maintenance please call Satellite Television and Radio Australia Pty Ltd on Telephone: (07) 3103 0477 or email admin@stra.com.au
