

Richmond reception rectified

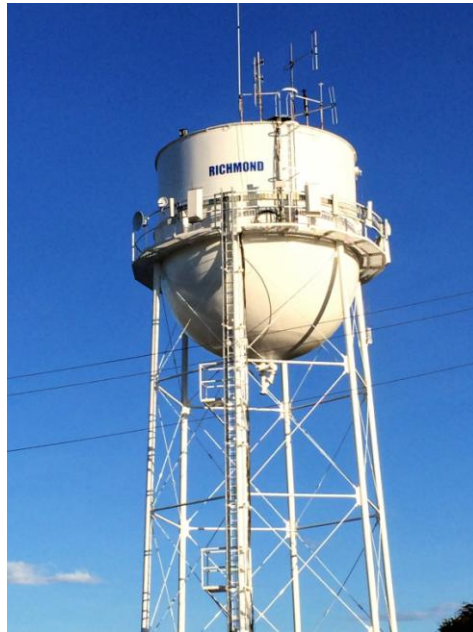

Richmond Shire residents are now enjoying fault free digital television for the first time in five years.

The Richmond Shire (Qld) not only now have perfect DTV services but the new transmitters and satellite head-end are DVB-T2 Ultra High Definition capable.

Last week Satellite Television and Radio Australia (STRA) removed all of the inadequate and faulty DTV equipment that the shire has endured since 2012. Until now, lip sync delays of up to four seconds, frequent picture pixillation, rain fade and very limited signal coverage were issues the long suffering Richmond community have had to endure.

The Richmond Shire has now gone from extremely poor digital TV to arguably the most advanced digital television self help re-transmission site in Australia.

Satellite Television and Radio Australia installed the latest Rohde & Schwarz TLU9 series digital transmitters and Appear TV head-end as used by leading broadcasters worldwide.

In addition to the supremely capable new system, STRA have full remote access to the system and can make any future changes and trouble-shoot remotely. A new high gain satellite dish has also now been installed to replace the old domestic dish. Rain fade will no longer be such a frequent issue.

CEO of Richmond Shire, Peter Bennett said the new DTV system is a significant improvement on the troublesome system that was originally installed. The original system never worked properly. All of the issues we used to have are now history. The picture quality is amazing and the lip sync issue

is gone.

Glenn Welsh, Managing Director at STRA said there are many other communities that are still tolerating poor digital TV re-transmission services when they really don't have to. Richmond Shire Council now have future proof DTV services that will provide many years of reliable service and, if Australia introduces next generation Ultra High Definition DVB-T2 then Richmond will be ready. Quality is always better value.

For more information about this installation or communications, wireless technology, remote site monitoring and maintenance please call Satellite Television and Radio Australia Pty Ltd on Telephone: (07) 3103 0477 or email admin@stra.com.au
