

Wiluna WA installs remotely manageable FM radio re-transmission site

Another new FM radio services retransmission site has now been established by STRA for the Shire of Wiluna in remote WA. This system now transmits Red FM, Triple J, ABC National and ABC Regional.

With Wiluna being an isolated community, it is necessary for this re-transmission to be remotely accessible by our technicians. Without remote management the costs to attend to even minor issues are prohibitively expensive.

Like most of our client sites, STRA will monitor this system remotely from Brisbane and take care of any issues or glitches should that ever happen.

Even simple demonstrations via the rack mounted monitor are possible so that we can train a local technician if any physical intervention is necessary.

Call us if you'd like your radio retransmission services to have remote management. It's a lot cheaper than getting a technician to distant and isolated sites.

Glenn Welsh, Managing Director at STRA, said there are many other communities that would have more reliable radio and DTV transmission services if they were remotely managed. The cost of travel and technicians time to attend a distant site can be many thousands of dollars. Having these services on-line to troubleshoot issues makes much more sense.

For more information about this installation or communications, wireless technology, remote site monitoring and maintenance please call Satellite Television and Radio Australia Pty Ltd on Telephone: (07) 3103 0477 or email admin@stra.com.au
